Communications Act of 1934

USE OF MINIMUM POWER {Unnecessary Power}

SEC. 324. In all circumstances, except in case of radio communications or signals relating to vessels in distress,

{all radio stations, including those owned and operated by the United States, shall use the minimum amount of power necessary to carry out the communication desired} Not Several States, under law {307b}.

Only A city and/or community.

50 thousand watts is overkill, at 723 feet antenna height = 75 thousand watts. This station is trying to override all other stations that are around it's frequency. This is preventing all other stations from pursuing their own desires. Does the FCC truly represent all station owners, or are their parcial to only those stations that have the highest power.... This seems to me to be a conflict of interest. I have no other option but to believe that it is a "I'll wash you back if you wash mine"... Was this the original purpose of the FCC? Or has the FCC also run amock with it's loyalty to certain individuals or companies that they deem as being of more importance.

There is no reason for WJBR to cover five states. This prevents all others to obtain a listening audience in the area that their radio station reside, especially if their frequency is close to the frequency of WJBR.... This is allowing us, an equal opportunity in the broadcasting industry.

I am not just attacking WJBR. This is the same problem for many other radio station owners throughout the United STates..... What is more important. Allowing individuals to purpose their own opportunity for employment or just to allow certain Broadcasting conglomerates to pursue just their own interests, and disregard all other radio stations and those who work for these smaller radio stations.

Futhermore:

Thursday, August 04, 2011

GET ME ANITHER FREQUINCEY THIS IS A EMERGENCY.

It is not 1934-1935-1936-1937, etc. When 50 thousand watts was a feasible theory, to reach the so called "WHITE FOLKS" because there were no stations.

It is 2011 AD there is no need for 50 thousand watt stations to serve a community.

The FCC needs to amend the radio act and drop all full power stations to 6000 watts max.

The FCC meeds to right now under Law have all full power Stations drop to 6000 watts MAX. under Law.

and open up the AIR WAYS WHICH BELONG TO ME AND THE CITIZENS OF THE UNITED STATES.

The Honorable Mark Loyd

I need help. I have now tried the 99.5 frequency for my radio station WRBG. I have to inform you that this frequency is no good. I need to be awarded another frequency such as 87.9 FM or 102.9 FM or

another frequency tht is free of a FLAME THROWER.

The FCC meeds to right now under Law have all full power Stations drop to 6000 watts MAX. under Law.

and open up the AIR WAYS WHICH BELONG TO ME AND THE CITIZENS OF THE UNITED STATES.

I need to change this week.

{Antenna 725 feet high. At 50 thousans watts} This station covers 5 {FIVE STATES}

Not a community. I am speaking about WJBR 99.5 Fm out of Wilmington, Delaware.

My station is not a translator station for WJBR 99.5 FM out of Wilmington, Delaware, and I do not get any money for running the programming on my station from WJBR. Yet, this is the station that constantly over rides my station and this is what people in the Millsboro, Delaware have to listen to.

If your intentions were for WJBR to be transmitted over my station, you should have told me, and allowed me to either accept it or not.

Amazing how WJBR 99.5 out of Wilmington, Delaware was able to have their station be broadcasted over my station free of charge.

What is the purpose for you to award a LP radio frequency, when there is another station, which is 50,000 watts over powering the LP Station. This radio station, WJBR 99.5 is almost a complete state away from my station, and yet, it over powers my broadcasting and I am not able to transmit even to the community around my station. What is the purpose.

I have paid money to upgrade my board, and I have even installed better antennas, which you are aware of, and still, I am not able to transmit the broadcasting of my station, even to a radius of 7 miles. This is ridiculus.

How can you allow a radio station to be 50,000 watts within such a small state, knowing that it's power would override stations within that state that are close to the same frequency. Especially my station.

I told the Media Bureau that 99.5 is no good, 3 years ago.

Here are the stats on WJBR 99.5 FM:

Antenna is at a height of 725 feet. At 50 thousands watts.. How do you expect a radio station that has an antenna tower height of 100 feet and at 100 watts to compete. Where is your logic.

Federal law 307 B has been violated.

WJBR-FM DE WILMINGTON USA

Licensee: WAEC LICENSE LIMITED PARTNERSHIP

Service Designation: FM 'Full Service' FM station or application

Channel/Class: 258B Frequency: 99.5 MHz Licensed

File No.: BMLH-20080516AAX Facility ID number: 14374

CDBS Application ID No.: 1242264

39° 50' 2.00 " N Latitude

75° 31' 27.00" W Longitude (NAD 27)

Polarization: Horizontal Vertical

Effective Radiated Power (ERP): 50. 50. kW ERP

Antenna Height Above Average Terrain: 152. 152. meters HAAT -- Calculate HAAT

Antenna Height Above Mean Sea Level: 221. 221. meters AMSL

Antenna Height Above Ground Level:

Antenna 725 feet high. At 50 thousands watts. This station, WJBR 99.5 FM, covers 5 states...

YYou have violated my right to transmit my broadcasting because you knew that this radio station WJBR 99.5, would override my power.

What you did is compromise me for a large entity which has radio stations spread all over this country. You went against my civil rights in favor of Cox and you shoved me under the coals for them.

I want another station frequency that will not be interfered with by a competitor. I have played your game and it is not working. YYou owe me a better frequency. Just because I am not a cox Broadcasting, or a large powerful station does not mean that I am not to be given the same courtesy that they are. I am also a business, and I deserve the same privileges that you have allowed for Cox,

and WJBR....

I am asking for either 87.9 or 102.9. I have been asking for these frequencies now for years, and after I played your game according to your rules and it did not work out, I believe now that I am entitled to one of the frequencies that I have requested.

Why don't you do right for once, and do something for the little man.... I know that you cater to the big money makers, but for once, do something for the little man, and not big business.

What really agrivates me is that these big conglomerates broadcast all over this country on various stations, and yet, it is all syndicated and there is one station where all programming comes from. MY station is live, 24/7 and it serves the community and their interests. These big conglomerates have caused many live hosts to loose their jobs which have been replaced by satellite feeds, and yet, my station has live hosts that cater to the community.

Do you realize that you are the cause of many employees loosing their jobs because of your loyalty to these large conglomerates like Cox? What happened to the original purpose for radio stations.... Were they not to be for the good of a community and it's people. Tell me, what does chicao have to do with Delaware, and yet, broadcasting will come from Chicago into the state of Delaware. Something is terribly wrong with this picture.

You need to establish the radio stations back to the purpose for which they were initiated. And you need to amend the power of frequencies so that they do not over power the individual radio stations within a certain state.

People in Millsboro, Delaware are not interested in the traffic conditions of Philadelphia, and yet, this is what is heard every day on my frequency to those of my community. Do you see something wrong with this picture. I doubt very much if there are any people who travel every day to Philadelphia.... We need to get back to being able to broadcast facts of interest for those in Millsboro, Delaware and to cater to the music interests of those who live in Millsboro, Delaware, and not the music interests of people living in Philadelphia and Washington.

I expect you to do what is right concerning this situation. I need a new frequency. A frequency that will not have a FLAME THROWER to over ride it. Like I said, I tried what you gave me, but I am telling you it is not working out. My station is not a translator station for WJBR 99.5 FM our of Wilmington, Delaware, and I do not get any money for running the programming from WJBR.
